PRODUCT REQUIREMENT DOCUMENT

PRD: n8n Business Process Automation — Workflow Showcase

PRD-2026 · AIAvenue Agency

Executive Summary

This product document defines four showcase n8n workflow automations designed for individuals, freelancers, and small-to-medium businesses who want to leverage AI and web automation without writing code. The four automations are: (1) Stock Analysis Bot — fetches real-time market data and delivers actionable Telegram alerts, (2) Daily News Briefing — curates and delivers personalised news at 9 AM via Telegram/WhatsApp, (3) Email Analysis with Auto-Reply — intelligently categorises inbound emails, generates contextual replies, and creates CRM notes, and (4) Complete CRM Automation Pipeline — end-to-end lead capture, enrichment, tracking, and nurturing workflow. Built on n8n (self-hosted or cloud), each workflow serves as both a standalone product and an onboarding template for the n8n platform. The target market includes 5,00,000+ individual traders, 2,00,000+ small businesses, and 1,00,000+ freelancers in India who need automation but cannot afford enterprise tools like Zapier (₹2,500+/month) or Make (₹1,500+/month). n8n's open-source core and one-time-payment self-hosting model (or free cloud tier with 1,000 executions/month) make it the most cost-effective automation platform for the Indian price-sensitive market.

Problem Statement

Core Problem

Indian professionals and small businesses waste 15–20 hours per week on repetitive digital tasks — checking stock prices across multiple sites, curating news, sorting and responding to emails manually, and managing leads across spreadsheets and messaging apps. SaaS automation tools like Zapier and Make are priced for Western markets (₹20,000–2,00,000/yr) and unaffordable for Indian individuals and SMEs. n8n offers a powerful free/self-hosted alternative, but its technical setup and workflow design learning curve prevent mass adoption.

User Pain Points

- **Stock Information Overload:** Active traders check 5–8 sources (NSE, BSE, Yahoo Finance, TradingView, Telegram groups) for price alerts, volume spikes, and news. Manual checking costs 30–45 minutes/day — potential of missed trading opportunities.
- **News FOMO:** Professionals follow 10+ news sources and still miss industry-specific updates. Manual browsing takes 20 minutes/day with low retention.
- **Email Inefficiency:** The average Indian professional receives 80–120 emails/day. 40% are routine (confirmations, invoices, newsletters). Sorting, reading, and responding takes 2–3 hours/day — the single biggest time sink.
- **CRM Fragmentation:** Small businesses track leads in Excel, follow up via WhatsApp, send quotes via email, and store documents in Google Drive. No unified pipeline. Leads fall through cracks — 30–50% of inbound leads never receive a follow-up.
- **Cost Barrier:** Enterprise automation tools are priced in dollars. Zapier's professional plan (₹2,500/month) costs more than most Indian freelancers' monthly phone bill. Self-hosted n8n costs ₹0/month infrastructure + ₹200/month VPS.
- **Technical Complexity:** n8n's node-based interface is powerful but intimidating for non-technical users. Pre-built, documented workflows reduce the learning curve from 2 weeks to 2 hours.

User Research & Personas

Persona 1: Amit Verma — Active Trader / Investor

Attribute	Detail
Age	34
Role	Software engineer who trades NSE/BSE equities and options part-time
Tech Comfort	High — comfortable with APIs, JSON, self-hosting
Daily Workflow	Wakes up at 8 AM; checks NSE website + TradingView + 3 Telegram channels for pre-market data; monitors portfolio through the day; checks again at 3:30 PM close
Pain Points	Cannot monitor stocks while working; misses breakout alerts; checks multiple sources manually; wants Telegram alerts for price targets and volume spikes
Needs	Pre-market stock report on Telegram at 8:30 AM; real-time price alerts; end-of-day portfolio summary

Persona 1: Amit Verma — Active Trader / Investor

Persona 2: Priya Mehta — Freelance Graphic Designer

Persona 3: Suresh Khandelwal — Small Business Owner

Market Analysis

Total Addressable Market (TAM)

The global intelligent process automation (IPA) market is valued at **$16.5 billion in 2025** (Gartner). India's share of the workflow automation and low-code/no-code platform market is estimated at **₹10,000–12,000 crore** (NASSCOM). The sub-segment of "individuals and micro-businesses" (1–10 employees) accounts for an estimated 18–22% — yielding a TAM of **₹1,800–2,640 crore**.

Serviceable Addressable Market (SAM)

Indian individuals and small businesses that: (a) are active internet users, (b) perform > 10 hours/week of repetitive digital tasks, and (c) earn > ₹5 L/yr (can afford ₹500–1,000/month for tools): approximately **2.8 million people**. At an average willingness-to-pay of ₹600/month for automation templates + hosting support, the SAM is approximately **₹2,016 crore/year**.

Serviceable Obtainable Market (SOM)

n8n's current Indian user base is estimated at ~15,000 active users (based on n8n community forum and cloud signup data). Targeting 10% of this base for premium workflow templates plus organic growth to 50,000 users over 3 years: 5,000 Year 1 → 15,000 Year 3. At ₹200/workflow (one-time) + ₹200/month support, the SOM is **₹60 lakh in Year 1** and **₹3.6 crore by Year 3**. Additional revenue from n8n self-hosting consulting (₹15,000–25,000/setup) for 50 clients/year: ₹75 lakh–1.25 Cr.

Market Rationale

- India has 1.2 million active demat accounts added every month (SEBI, 2025) — each a potential stock alert user
- Indian freelancer economy: 15+ million freelancers (NASSCOM) — most underserved by automation tools
- Indian SMEs: 63 million businesses (Ministry of MSME) — 99% are micro-businesses with no automation
- Zapier's Indian pricing (₹2,500/month for 2,000 tasks) is 1.5× the median Indian data plan cost — prohibitively expensive
- n8n self-hosted on a ₹200/month VPS can handle unlimited tasks — 50× cheaper than Zapier
- ChatGPT and AI have made automation aspirational — users want "AI-powered" workflows, not just "if-this-then-that"

Competitive Analysis

Competitor	Strengths	Weaknesses	Our Edge
Zapier	5,000+ integrations, best UX, brand trust, AI features (Zapier Central)	Extreme pricing (₹2,500+/mo), task limits, no self-hosting, no local-India integrations	50× cheaper (self-hosted), unlimited tasks, Indian stock exchange integrations, WhatsApp-first
Make (Integromat)	Visual builder with advanced logic, 1,500+ apps, generous free tier (1,000 ops/mo)	Free tier too small for daily workflows; paid plans ₹1,500+/mo; no self-hosting; steep learning curve	Self-hosted = cost freedom; n8n community is more open-source friendly; no op limits
Microsoft Power Automate	Office 365 integration, enterprise security, AI Builder	Requires M365 license (₹1,500/user/mo), limited non-Microsoft integrations, heavy client	Zero licensing cost, any-API flexibility, works with Gmail/WhatsApp/Telegram — non-Microsoft stack preferred in India
IFTTT	Simplest automation tool, free tier usable	Very limited (1 trigger → 1 action), no logic, no conditions, no AI	Full workflow logic, conditions, loops, AI/LLM integration, complex multi-step pipelines
Manual / Scripts	100% custom, zero tool cost, full control	Requires coding skills, maintenance burden, no visual debugging, no error handling	Zero coding needed, visual debugger, pre-built templates, community support, error handling built-in

Pricing Comparison (Monthly, Indian Market)

Solution Overview

The 4 Automations

A1 — Stock Analysis + Telegram Alerts

Trigger: Cron (8:30 AM, 3:30 PM IST) + optional webhook for manual trigger **Workflow:** 1. Fetch NSE/BSE indices data via Yahoo Finance API (unofficial API: `nsepy` equivalent via HTTP request) 2. Fetch user's watchlist (from Google Sheets or n8n variable) 3. For each stock: fetch current price, day change %, volume vs. 10-day average 4. Calculate: price target breach alert, volume spike (> 2× avg), 52-week high/low proximity 5. Format message with emojis: "📈 NIFTY 50: 22,450 (+0.8%) | Your watchlist: 5 up, 2 down" 6. Send to Telegram bot with inline buttons (Refresh / Full Report / Set Alert)

Output Examples:

- **Pre-Market Brief (8:30 AM):** Index levels, gap-up/gap-down, futures data, 3 news headlines per watchlist stock
- **Intraday Alert (real-time):** "🔔 RELIANCE: Volume spike detected! Current ₹2,845 (+2.1%), volume 3.2× 10-day avg"
- **EOD Summary (3:45 PM):** P&L for day, top gainers/losers in portfolio, alerts for next day

A2 — Daily News Briefing (9 AM Delivery)

Trigger: Cron (9:00 AM IST, Monday–Saturday) **Workflow:** 1. Fetch from RSS feeds (user-configurable: Economic Times, Hindu BusinessLine, TechCrunch, specific blogs) 2. Fetch from Google News RSS for user's industry keywords 3. Deduplicate articles by title similarity (basic NLP in n8n Function node) 4. Summarise each article using n8n's OpenAI node (or local LLM via Ollama) 5. Rank by relevance score (keyword match count + source credibility weight) 6. Format into concise briefing: "🌞 Your Daily Brief — May 12, 2026\n\nHeadlines: ...\nDeep Read: ...\nQuick Bytes: ..." 7. Send to Telegram and WhatsApp (via WhatsApp Business API / Baileys bridge)

Personalisation:

- User selects: industry (fintech, SaaS, manufacturing), companies to track, topics to exclude
- Bilingual support: Hindi + English mixed briefing (LLM-controlled)

A3 — Email Analysis + Auto-Reply + Notes

Trigger: Gmail watch webhook (push notification for new email) or IMAP poll (every 5 min) **Workflow:** 1. Fetch unread email from Gmail using IMAP node (or Gmail API node) 2. AI classification using OpenAI node: - Category: Invoice / Lead / Support / Spam / Newsletter / Internal - Urgency: High / Medium / Low - Sentiment: Positive / Neutral / Negative 3. For each category: - **Invoice:** Extract amount, due date, vendor → append to "Bills Tracker" Google Sheet → archive email - **Lead:** Extract contact details, product interest → add to CRM (Google Sheets) → send WhatsApp alert to sales team → send auto-reply "Thank you for your interest, our team will reach out within 2 hours" - **Support:** Extract issue summary → log to support tracker → send auto-reply with ticket ID + expected resolution SLA - **Newsletter:** Mark as read → archive - **Spam:** Move to spam folder 4. Generate daily email digest: "📬 Yesterday's Email Summary: 48 received, 6 action items, 3 invoices due"

A4 — Complete CRM Automation Pipeline

Trigger: New lead from any source (web form → webhook, WhatsApp message, email, LinkedIn message) **Workflow:** 1. **Capture:** New Google Form submission / WhatsApp message to business number / email to sales@ → creates lead record in Google Sheets 2. **Enrich:** Look up lead company via Clearbit API (or free manual enrichment template) → append industry, size, location 3. **Score:** Lead scoring rules in n8n Switch node: - Score ≥ 80: Hot lead → send WhatsApp to sales team immediately + schedule email within 1 hour - Score 50–79: Warm lead → add to nurture sequence (email Day 1, WhatsApp Day 3, call Day 7) - Score < 50: Cold lead → add to monthly newsletter list 4. **Track:** Update lead stage in Google Sheets (New → Contacted → Qualified → Proposal → Negotiation → Won/Lost) 5. **Notify:** Send formatted WhatsApp message to sales group: "🟢 Hot lead! Acme Corp (Mumbai) — interested in ERP solution — ₹15L potential — contact: Rajesh, +91-98765-43210" 6. **Report:** Weekly CRM summary with pipeline value, conversion rate, and bottleneck stage

Feature Deep-Dive (RICE Priority Matrix)

Automation	Reach (potential users)	Impact (1–5)	Confidence (%)	Effort (person-days)	RICE Score
A1 — Stock Analysis Bot	5,00,000 (traders)	4	85%	5	340,000
A2 — Daily News Briefing	10,00,000 (professionals)	3	80%	4	600,000
A3 — Email Analysis + Auto-Reply	50,00,000 (email users)	5	75%	10	1,875,000
A4 — CRM Automation Pipeline	63,00,000 (SMEs)	5	80%	8	3,150,000
Template documentation + video	— (all users)	4	90%	3	—
One-click deploy script (Docker)	— (all users)	5	95%	2	—
Watchlist configuration UI	5,00,000	3	80%	3	400,000
WhatsApp Business API integration	50,00,000	5	70%	5	3,500,000

Top Priorities: 1. WhatsApp Business API integration (3,500,000) — highest RICE, WhatsApp is India's primary business channel 2. CRM Automation Pipeline (3,150,000) — addresses the biggest pain point (lead leakage) 3. Email Analysis (1,875,000) — 2–3 hour/day saving per user 4. News Briefing (600,000) — easiest viral hook 5. Watchlist config UI (400,000) — usability for non-technical traders

---

Success Metrics (KPIs)

KPI	Target (Month 6)	Measurement
Workflow template downloads	> 2,000 total (500 per workflow)	n8n marketplace / GitHub releases
Active installations (30-day)	> 800	Telemetry (opt-in)
Average user time saved/week	> 10 hours	User survey at Day 30
Workflow customisation rate	> 40% of users modify templates	Config change tracking
User satisfaction (CSAT)	> 4.2 / 5	In-workflow NPS survey
Docker one-click deploy success	> 85% first-try success	Deploy telemetry
Support tickets / 100 users	< 5	Support system
Paid template conversions	> 10% of free users → paid	Payment system
n8n community forum mentions	> 200 positive mentions/month	Forum API

Roadmap

Phase 1 — Core Workflows (Weeks 1–4)

- **Week 1:** A1 — Stock Analysis Bot

- n8n HTTP node to Yahoo Finance / NSE data - Price threshold logic + volume spike detection - Telegram Bot node integration - Pre-market, intraday, EOD formats

- **Week 2:** A2 — Daily News Briefing

- RSS feed aggregation + Google News RSS - OpenAI summarisation node - Multi-channel output (Telegram + WhatsApp) - User industry keyword config

- **Week 3:** A3 — Email Analysis

- Gmail IMAP node with 5-min poll - OpenAI classification (4 categories) - Google Sheets append for invoices + leads - Auto-reply generation for leads and support

- **Week 4:** A4 — CRM Pipeline

- Webhook trigger + Google Forms integration - Lead enrichment (Clearbit / manual) - Lead scoring with n8n Switch node - WhatsApp notification to sales team

Phase 2 — Usability + Documentation (Weeks 5–6)

- Comprehensive README for each workflow (setup instructions, env vars, screenshots)
- Video walkthroughs (5–10 min each) for non-technical users
- Docker Compose one-click deploy script
- Environment variables template (`.env.example`)
- User config guide: how to set watchlist, keywords, email rules
- Troubleshooting FAQ for common issues

Phase 3 — Distribution + Community (Weeks 7–8)

- Publish all workflows to n8n community marketplace
- Launch GitHub repository with examples and templates
- Write blog posts: "5 automations that save 10 hours/week with n8n"
- Create Telegram group for users to share customisations
- Collect testimonials and case studies from first 50 users

Phase 4 — Monetisation + Scale (Month 3–6)

- Premium tier: Advanced workflows (multi-LLM, custom analytics dashboard)
- One-click n8n setup service for non-technical users (₹15,000/setup)
- Monthly subscription for workflow updates + support (₹500/month)
- Enterprise tier: Multi-user workflow management, SLA, custom workflow development
- Build n8n workflow template marketplace in India
- Partner with VPS providers (DigitalOcean, Hostinger, AWS Lightsail) for bundled deploy

---

Impact Estimate

User Impact (Per Person)

Automation	Time Saved/Week	Monetary Value (₹/month @ ₹500/hr)
A1 — Stock Bot	3 hours (manual checking)	₹6,000
A2 — News Briefing	2 hours (browsing + reading)	₹4,000
A3 — Email Analysis	8 hours (sorting + replying)	₹16,000
A4 — CRM Pipeline	5 hours (manual CRM + follow-up)	₹10,000
Total	**18 hours/week**	**₹36,000/month**
Workflow cost (self-hosted n8n)	—	**₹200/month (VPS)**
Net user benefit	—	**₹35,800/month — 179× ROI**

User Impact (Per Person)

Business Impact (Template Publisher)

Ecosystem Impact

Strategic Positioning

- **For n8n (the company):** India is n8n's fastest-growing market by community signups (50% YoY). These workflows serve as distribution — every user who deploys these templates becomes a long-term n8n user, reinforcing the platform's position against Zapier and Make in India.
- **For the Indian automation ecosystem:** Lowers the barrier to entry for automation from ₹2,500/month (Zapier) to ₹200/month (VPS), democratising access to AI-powered business automation for millions of small businesses and professionals who were priced out.
- **For AI adoption:** Each workflow includes LLM integration — email classification, news summarisation, lead scoring — introducing thousands of Indian users to practical AI in their daily workflow, building comfort and demand for more advanced AI automation.
