CASE STUDY

Trading Education Landing Page

Type: Client Project

Domain: Fintech · Growth Marketing

Status: Live (Testing Phase)

Client Project | Fintech · Growth Marketing | Product Portfolio | Trading

Type: Client Project | **Domain:** Fintech · Growth Marketing | **Status:** 🟢 Live (Testing Phase)

Objective

Convert cold digital traffic into verified leads for a trading education platform (HighProbTrade) offering two subscription tiers: Basic (₹4,999) and Basic + Advanced (₹9,999).

The primary conversion challenge: **trading education is a high-trust, high-scepticism category.** Users have been burned by low-quality "trading courses" and approach new platforms with distrust. Getting a form submission requires more than a good headline.

Competitive Analysis

Analysed 8 fintech education landing pages for:

- Trust signal placement and type
- CTA copy and positioning
- Pricing presentation patterns
- Social proof format (testimonials, numbers, credentials)
- Form friction (fields, verification, commitment level)

Pattern found: High-converting pages in this category lead with a specific, verifiable claim — not a generic promise. "3× your trade accuracy" outperforms "learn to trade" because it sets a measurable expectation.

Conversion Architecture

```
Section 1 — Hero
"Trade Smarter with AI Precision"
→ Specific AI capability claim
→ 3 stat cards (credibility signals)
→ Primary CTA: Get Early Access

Section 2 — Features/Screenshots
→ Carousel of 4 platform features
→ Mock dashboard previews (replaced with real screenshots at launch)
→ Shows the product before asking for commitment

Section 3 — AI Demo
→ Realistic AI analysis card: RELIANCE trade read
→ Shows sentiment, confidence %, entry/target/stop-loss
→ Demonstrates value before paywall

Section 4 — Pricing
→ Two clear plans: ₹4,999 (Basic) / ₹9,999 (Basic + Advanced)
→ Feature comparison table
→ No hidden complexity
```

```
Section 5 — Lead Capture
→ Email OTP verification (Firebase passwordless auth)
→ 3 fields only: Name, Email, Phone (optional)
→ Verified leads only — filters out casual browsers
```

Key Product Decisions

Email OTP verification over standard form submission

Standard forms capture unverified emails — high volume, low quality. Email OTP ensures every lead is verified and has genuine intent. Conversion volume drops but lead quality increases significantly. For a high-ticket product (₹4,999+), quality beats quantity.

AI Demo section before pricing

Showing the AI trade analysis capability before presenting pricing converts the user's question from "should I pay for this?" to "how much does this cost?" — a fundamentally different intent state.

Two-tier pricing (not three)

Three pricing tiers create decision paralysis. Two tiers — Basic vs Basic + Advanced — create a simple anchor comparison. Most users either want everything or want to start minimal.

Tech Stack

LAYER	TOOL
Framework	React 19 + Vite 6
Styling	Tailwind CSS 4
Auth	Firebase Email Link (passwordless OTP)
Database	Firestore (leads collection)
Analytics	Firebase Analytics
Hosting	Vercel

Lead Data Captured

```
{
  "name": "string (required)",
  "email": "string (required, OTP verified)",
  "phone": "string (optional)",
  "planInterest": "undecided | basic | advanced",
  "createdAt": "server timestamp"
}
```

Metrics Tracked

- OTP send → OTP verify completion rate (email verification funnel)
- Plan interest distribution (Basic vs Advanced vs Undecided)
- Traffic source → Lead conversion by channel
- Time on AI Demo section (proxy for intent signal)
