PRD: Websites.co.in — Post-Login Dashboard UX Redesign

PRD-2026 · AIAvenue Agency

Executive Summary

This PRD outlines the complete UX redesign of the Websites.co.in post-login dashboard — the core experience where users manage their website-building journey. The current dashboard suffers from low feature discoverability, high cognitive load, and a steep learning curve that leads to a ~40% drop-off in the first session. The redesign introduces 6 mobile-first screens (390×844px) targeting the AI-powered website creation flow: Post-Login Home, AI Setup Flow (3-question wizard), Template Picker, AI Business Chat (a conversational content collection with gap analysis — this project's core innovation), Preview & Publish, and a Success State. The designs are generated via a Figma plugin (`code.js`) that produces pixel-perfect screens programmatically. The redesign applies foundational UX principles: progressive disclosure, goal-gradient effect, recognition over recall, Fitts's Law, Hick's Law, emotional design, and conversational UI patterns. The objective is to increase first-session completion rate from 42% to 72% and reduce time-to-publish from 45 minutes to under 12 minutes.

Problem Statement

Core Problem

Websites.co.in's post-login dashboard presents users with a blank canvas and 20+ scattered options — overwhelming non-technical small business owners who want a guided, conversational path to publishing their website.

User Pain Points

- **Blank Slate Anxiety:** The current dashboard opens to a sparse homepage with no clear next step. Users freeze — 40% leave within 90 seconds.
- **Information Overload:** 14 menu items, 6 sidebar sections, and 3 action bars compete for attention. Hick's Law violations abound — decision time exceeds 12 seconds.
- **Broken AI Handoff:** The AI assistant is buried under "Tools → AI → Build with AI" (3 clicks deep). Users don't know it exists.
- **No Progress Visibility:** Users cannot tell where they are in the 9-step website creation funnel. Goal-gradient effect untapped — no progress bars, no milestones.
- **Content Collection is Manual:** Users must type long paragraphs about their business with zero guidance. The AI provides no scaffolding or examples, causing low-quality outputs and repeated edits.
- **Form Fatigue:** The current setup flow requires filling 4 long forms with 28 total fields — excessive cognitive load for a first session.
- **Mobile Experience is Broken:** The desktop-first design renders poorly on mobile, with overlapping elements and non-tappable targets violating Fitts's Law (minimum 44×44px touch targets).

Core Innovation Opportunity

Replace the static form-based content collection with an **AI Business Chat** that uses a conversational, multi-turn interface. The chat asks about the business, analyses responses in real-time, performs gap analysis to identify missing information, and progressively collects all content needed to generate a complete website — without the user ever filling a form.

User Research & Personas

Persona 1: Ananya Patel — Salon Owner

Attribute	Detail
Age	31
Role	Owner of a 3-chair salon in Pune
Tech Comfort	Low — Instagram and WhatsApp daily; never used a website builder
Goal	Get a professional website online within 1 hour
Current Behaviour	Abandons the current dashboard after 2 minutes; calls support
Needs	Step-by-step guidance, conversational questions, preview before publish, no technical jargon

Persona 1: Ananya Patel — Salon Owner

Persona 2: Vikram Joshi — Real Estate Agent

Persona 3: Meera Iyer — Freelance Graphic Designer

Market Analysis

Total Addressable Market (TAM)

India's website builder and CMS market is projected at **₹3,200 crore in 2025**, growing at 14% CAGR. This includes DIY website builders, managed WordPress, and AI website platforms. The global DIY website builder market is $22.6 billion.

Serviceable Addressable Market (SAM)

Small business owners and freelancers in India who need a website but have no coding skills: approximately **2.8 million potential users** across retail (35%), professional services (28%), creative professions (18%), and local businesses (19%). At an average ARPU of ₹6,000/year, the SAM is **₹1,680 crore**.

Serviceable Obtainable Market (SOM)

Websites.co.in's current active user base is 48,000 users. With the UX redesign improving conversion from 42% to 72%, the platform can capture an additional **₹8.6 crore/year** from existing traffic. Aggressive marketing can grow the base to 200,000 users by Year 3, yielding a SOM of **₹120 crore/year**.

Market Rationale

- 67% of Indian small businesses still lack a website (Google My Business survey, 2024)
- Mobile-first internet users in India exceed 850 million — mobile-optimised website creation is non-negotiable
- AI-powered website builders (Wix ADI, Bookmark, 10Web) are growing 3× faster than traditional builders
- The "conversational" approach to website creation (pioneered by Durable.co) shows 2.5× higher completion rates than form-based flows

---

Competitive Analysis

Competitor	Strengths	Weaknesses	Our Edge
Wix ADI	AI-powered setup, large template library, strong brand	Expensive (₹2,000+/month), ads on free tier, crowded interface	Simpler 3-question flow + conversational AI chat; lower price point (₹499/month)
Durable.co	Fastest setup (30 seconds claim), clean UI	Very basic output, limited customisation, no Indian business templates	Depth of AI gap analysis; India-specific content (GST, UPI, local language support coming)
GoDaddy Website Builder	Massive reach, domain + hosting bundle, 24/7 support	Outdated editor, mobile-unfriendly admin, poor AI output quality	Modern mobile-first admin; Figma-precise design system; conversational UI
WordPress + Elementor	Unlimited customisation, huge plugin ecosystem, SEO power	Steep learning curve, requires hosting, slow page speed	Zero learning curve; 12-minute publish time vs. 4+ hours on Elementor
Newfold / HostGator Builder	Aggressive pricing (₹99/month), bundle with hosting	Very basic features, no AI, poor template quality	AI content generation with gap analysis; emotional design; India-specific

---

Solution Overview

The 6 Screens (390×844px Mobile-First)

S1 — Post-Login Home

- Warm welcome with user's name and business name (recognition over recall)
- Single primary CTA: "Build Your Website with AI" (large, centred, Fitts's Law compliant)
- Progress arc showing "You're 0% done — let's change that" (goal-gradient trigger)
- Minimal navigation: 3 bottom tabs (Home, My Sites, Account)
- Emotional design: illustration of a person building with blocks, warm gradient background

S2 — AI Setup Flow (3 Questions)

- Progressive disclosure: one question at a time with animated transitions
- Q1: "What kind of website do you need?" — 4 visual cards (Business, Portfolio, Store, Blog)
- Q2: "What's your business called?" — single text input with smart autofill from Google My Business API
- Q3: "What's your main goal?" — 3 options (Get Customers, Show Work, Sell Online)
- Goal-gradient: step indicator with checkmarks and celebratory micro-animations on completion

S3 — Template Picker

- 6 curated templates matching Q1 answer (not 200+ overwhelming options — Hick's Law)
- Templates shown as full-width mockup cards with category badges
- "AI Recommended" badge on top-2 templates based on business category
- Tap to preview full-screen, swipe left/right between templates
- Bottom CTA: "Choose & Continue" (uses Fitts's Law — large, thumb-reachable zone)

S4 — AI Business Chat (Core Innovation)

- **Conversational UI:** Chat interface where AI asks questions about the business — one at a time
- **Auto-generated questions:** Based on template + business type
- **Gap Analysis Engine:** As user types responses, AI detects missing content:

- "I see you mentioned your services but not your pricing. Would you like to add pricing?" - "You said you've been in business since 2018 — should we add a timeline section?" - "I notice you haven't mentioned customer testimonials. Shall I draft a testimonial section?"

- **Visual scaffolding:** Suggested replies, example text, image upload prompts
- **Rich responses:** AI responses include inline previews of how the content will appear
- **Progress ring:** Shows content completeness percentage (goal-gradient effect)
- **Exit anytime:** "Preview My Website" button always visible in header

S5 — Preview & Publish

- Live mobile preview of the website with real content
- 3 tabs: Mobile Preview, Desktop Preview, Content Summary
- Content Summary tab shows all sections with Edit buttons next to each
- Gap analysis results shown as actionable checklist: "3 suggestions to improve your site"
- Publish button with pricing plan selector (Free with watermark / ₹499/mo no watermark)
- Fitts's Law: Publish button is full-width, sticky at bottom

S6 — Success State

- Confetti animation + "Your website is live!" message
- 3 action cards: View Site, Share on WhatsApp, Edit More
- Milestone unlocked badge — triggers dopamine loop
- Next-session goal: "Now let's get you found on Google — set up SEO in 2 minutes"
- Exit survey trigger (NPS) after 15 seconds

Figma Plugin (`code.js`)

- Generates all 6 screens at 390×844px programmatically
- Uses auto-layout, colour tokens, and component instances
- Outputs to a single Figma page with screen frames in reading order
- Supports design token overrides for A/B testing variants

UX Principles Applied

Principle	Application
Progressive Disclosure	One question at a time; advanced settings hidden until needed
Goal-Gradient Effect	Progress ring, step indicator, "70% complete — almost there!" messaging
Recognition Over Recall	Visual cards with icons, template previews, suggested replies; no blank text fields
Fitts's Law	44×44px minimum tap targets; primary CTA in thumb zone (bottom 1/3 of screen)
Hick's Law	4 choices max at any decision point; templates limited to 6 curated options
Emotional Design	Warm colours, celebratory animations, friendly copy, illustration characters
Conversational UI	Chat format reduces form anxiety; AI adapts tone to user responses

The 6 Screens (390×844px Mobile-First)

S1 — Post-Login Home

- Warm welcome with user's name and business name (recognition over recall)
- Single primary CTA: "Build Your Website with AI" (large, centred, Fitts's Law compliant)

- **Progress ring:** Shows content completeness percentage (goal-gradient effect)
- **Exit anytime:** "Preview My Website" button always visible in header

S5 — Preview & Publish

- Live mobile preview of the website with real content
- 3 tabs: Mobile Preview, Desktop Preview, Content Summary
- Content Summary tab shows all sections with Edit buttons next to each
- Gap analysis results shown as actionable checklist: "3 suggestions to improve your site"
- Publish button with pricing plan selector (Free with watermark / ₹499/mo no watermark)
- Fitts's Law: Publish button is full-width, sticky at bottom

S6 — Success State

- Confetti animation + "Your website is live!" message
- 3 action cards: View Site, Share on WhatsApp, Edit More
- Milestone unlocked badge — triggers dopamine loop
- Next-session goal: "Now let's get you found on Google — set up SEO in 2 minutes"
- Exit survey trigger (NPS) after 15 seconds

Figma Plugin (`code.js`)

- Generates all 6 screens at 390×844px programmatically
- Uses auto-layout, colour tokens, and component instances
- Outputs to a single Figma page with screen frames in reading order
- Supports design token overrides for A/B testing variants

UX Principles Applied

Feature Deep-Dive (RICE Priority Matrix)

Feature	Reach (users/month)	Impact (1–5)	Confidence (%)	Effort (person-weeks)	RICE Score
S1 — Post-Login Home redesign	48,000	5	90%	2	108,000
S2 — 3-Question AI Setup Flow	48,000	5	85%	3	68,000
S3 — Curated Template Picker	48,000	4	80%	2	76,800
S4 — AI Business Chat with Gap Analysis	48,000	5	75%	8	22,500
S5 — Preview & Publish	48,000	5	90%	3	72,000
S6 — Success State with confetti	48,000	3	90%	1	129,600
Figma plugin (code.js) automation	— (design team)	4	85%	3	—
Goal-gradient progress indicators	48,000	4	80%	1	153,600
Fitts's Law touch-target audit	48,000	5	95%	1	228,000
Emotional design (illustrations + copy)	48,000	3	70%	2	50,400

Formula: RICE = (Reach × Impact × Confidence) / Effort

Top Priority UX Fixes: 1. Fitts's Law touch-target audit (228,000) — foundational for all screens 2. Goal-gradient progress indicators (153,600) — high confidence, low effort 3. Success State with confetti (129,600) — emotional payoff, trivial effort 4. Post-Login Home redesign (108,000) — first impression 5. Template Picker (76,800) — high reach, moderate effort

---

Success Metrics (KPIs)

KPI	Baseline	Target (Month 3)	Measurement
First-session completion rate	42%	72%	Amplitude funnel analysis
Time to publish (first site)	45 minutes	< 12 minutes	Product analytics
NPS (post-login experience)	18	55	In-app survey (S6)
AI setup flow abandonment	58%	< 25%	Step-level funnel
Template-to-preview conversion	34%	65%	Click tracking
Gap analysis accepted suggestions/user	—	> 4	AI response tracking
Mobile dashboard bounce rate	64%	< 30%	Analytics
Figma plugin design generation time	—	< 8 seconds	Plugin telemetry

---

Roadmap

Phase 1 — UX Foundation + Plugin (Weeks 1–4)

- UX audit of current dashboard (identify all Hick's Law, Fitts's Law violations)
- Design system tokens (colours, typography, spacing) for mobile 390×844px
- Build Figma plugin (`code.js`) with auto-layout frame generation
- Create all 6 screen components in plugin with token-based styling
- Internal design review of generated screens

Phase 2 — Core Screens + AI Chat Prototype (Weeks 5–10)

- Frontend implementation: S1 (Post-Login Home) + S2 (3-Question Flow)
- Implement goal-gradient progress indicators and step trackers
- Build S3 (Template Picker) with API-driven template recommendation
- **Prototype S4 (AI Business Chat):** conversational UI shell, question generation engine, response parser
- Build gap analysis algorithm (rule-based: detect missing sections from NLP keywords)
- User testing (round 1): 10 participants, moderated

Phase 3 — Preview, Publish, Success + Polish (Weeks 11–14)

- S5 (Preview & Publish) with live mobile/desktop preview
- S6 (Success State) with confetti animation and share actions
- Integrate AI Business Chat with production LLM (GPT-4 or Gemini)
- Fitts's Law audit pass — ensure all touch targets ≥ 44×44px

- Emotional design pass — illustrations, micro-copy, micro-interactions
- Performance optimisation (LCP < 2.5s, FID < 100ms)
- UAT with 50 beta users

Phase 4 — Launch + Iteration (Month 4–6)

- Canary launch to 10% of users → monitor funnels → iterate
- Full rollout with A/B test (old dashboard vs. new)
- Post-launch analytics review and gap analysis accuracy tuning
- V2.0: Hindi + 4 regional languages for AI chat
- V2.0: Voice input for AI chat

Impact Estimate

Quantitative Impact (Monthly)

Metric	Before (Current)	After (Redesign)	Change
New users completing first site	20,160/month	34,560/month	+14,400 users
Average time to publish	45 min	12 min	73% faster
Support tickets (dashboard-related)	1,200/month	350/month	71% reduction
Mobile completion rate	28%	65%	+37 pp
AI feature adoption	8%	55%	+47 pp

Quantitative Impact (Monthly)

Revenue Impact (₹/year)

Qualitative Impact

- **Brand perception shift:** From "confusing tool" to "magical experience" — drives word-of-mouth
- **Mobile reputation:** First genuinely mobile-friendly website builder admin in India — PR opportunity
- **AI differentiation:** Conversational gap analysis positions Websites.co.in as AI-innovator, not me-too
- **Future optionality:** Chat UX foundation enables voice, WhatsApp, and multilingual interfaces

Cost-Benefit
