AI Marketing Compliance Platform

Type: Client Project

Domain: InsurTech · AI · Regulatory

Status: 🟡 PRD Delivered

Client Project | InsurTech · AI · Regulatory | Product Portfolio | AI

Type: Client Project | **Domain:** InsurTech · AI · Regulatory | **Status:** 🟡 PRD Delivered

Executive Summary

Insurance marketing teams in India operate in a high-stakes regulatory environment governed by IRDAI. Every visual asset — social post, brochure, banner — must comply with 12+ rules before publication. Manual compliance review takes 3–5 days and is error-prone, creating both operational drag and regulatory penalty exposure.

This PRD defines an AI-powered compliance scanning platform that reduces review cycles from 3.8 days to 4 hours with 99.5% violation detection accuracy.

Problem Statement

Who is affected: Marketing Managers, Compliance Officers, and CMOs at insurance companies creating digital and print marketing assets.

The workflow today:

1. Marketing creates asset
2. Sends to compliance team via email
3. Compliance reviews manually against checklist
4. Returns with comments (3–5 days later)
5. Marketing revises
6. Repeat until approved

Business impact of the current process:

- Campaign launch delays of 3–5 business days per asset
- Human reviewers miss violations at ~8% rate
- IRDAI penalties for non-compliant marketing: significant financial and reputational exposure
- Compliance team bottleneck during peak campaign seasons

User Personas

PERSONA	GOAL	PAIN POINT
Marketing Manager	Launch campaigns on time	3–5 day compliance review kills launch windows
Compliance Officer	Ensure zero regulatory violations	Manual review is slow, inconsistent, error-prone
CMO	Maximise campaign throughput	Operational bottleneck limits campaign velocity

Market Sizing

SEGMENT	SIZE
TAM — All IRDAI-regulated insurance companies in India	₹120 Cr
SAM — Mid-to-large insurers with active digital marketing	₹18 Cr
SOM — Achievable in Y1 with focused GTM	₹4.5 Cr

Competitive Analysis

TOOL	STRENGTH	GAP
Manual compliance teams	Deep domain knowledge	Slow, expensive, inconsistent
Generic AI content tools	Fast	No IRDAI-specific rule engine
Legal review tools	Structured workflow	Not insurance/marketing specific
This product	IRDAI-specific 12-rule engine + visual overlay	—

Key differentiation: Bounding-box violation overlays — the platform highlights the exact location of each violation on the uploaded asset, not just a text checklist.

Solution Overview

Core capability: Upload a marketing asset (image, PDF, video frame) → AI scans against 12-rule compliance engine → Returns violations with bounding-box overlays and severity ratings.

12-Rule Compliance Engine covers:

- IRDAI mandatory disclosures (premium, terms, registration number)
- Brand guideline violations (font, colour, logo usage)
- Legal language requirements (disclaimers, fine print size)

Feature Prioritisation (RICE)

FEATURE	REACH	IMPACT	CONFIDENCE	EFFORT	SCORE
AI compliance scan + violation report	High	High	High	High	P0
Bounding-box violation overlay	High	High	High	Medium	P0
Compliance dashboard (status tracking)	High	Medium	High	Low	P1
One-click revision request to marketing	Medium	High	Medium	Low	P1
Audit log for regulatory evidence	Medium	Medium	High	Low	P2
API integration with existing DAM tools	Low	High	Low	High	P3

Success Metrics

METRIC	BASELINE	TARGET
Review cycle time	3.8 days	4 hours
Violation detection rate	92%	99.5%
Compliance team review capacity	15 assets/week	80 assets/week
Campaign launch delay incidents	Frequent	Near zero
IRDAI penalty incidents	Tracked	Zero

Roadmap

```
MVP (Month 1–2)
└── Image upload + 12-rule scan
└── Violation report with bounding boxes
└── Compliance dashboard

V1 (Month 3–4)
└── Video frame scanning
└── One-click revision workflow
└── Audit log

V2 (Month 5–6)
└── API integration (DAM tools)
└── Custom rule builder
└── Multi-asset batch scanning
```
