Problem Framing

India has an estimated 5M+ unorganised laundry businesses — from small dhobis to growing laundry chains. The vast majority run entirely on memory and paper: no order tracking, no customer history, no inventory visibility, no CRM.

This creates a specific, recurring failure pattern:

> *Customer drops off 8 items → gets a token → comes back next week → dhobi can't find the order → customer upset → business loses a repeat customer*

The core problem: No system of record means every operational failure is invisible until it becomes a customer complaint.

User Research Insights

Interviewed laundry business operators across three segments:

- Single-operator dhobi (sole proprietor)
- Growing laundry shop (2–5 staff)
- Laundry chain (5+ locations)

Common pain points across all segments:

PAIN POINT	FREQUENCY	IMPACT
Lost or confused orders	Very high	Direct revenue loss
No customer history for repeat visits	High	Can't personalise service
Manual stain assessment on intake	High	Disputes at pickup
No inventory tracking (detergent, hangers)	Medium	Stockouts disrupt operations
No daily revenue summary	Medium	No business visibility

Solution Overview

An AI-powered POS system designed specifically for laundry businesses — from intake to pickup.

Core Modules:

1. 4-Step Order Wizard

```
Step 1: Customer identification (new or returning)
Step 2: Item entry (type, count, stain notes)
```

```
Step 3: Claude Vision stain detection (photo upload → AI assessment)
Step 4: Price calculation + token generation
```

2. Morning Briefing Dashboard

A daily summary view operators see when they open the app:

- Orders due today
- Revenue vs yesterday
- Pending pickups
- Low inventory alerts

3. Agentic Chat POS

Natural language order entry — operator describes the order verbally, AI converts to structured data. Designed for operators who find typing slow or uncomfortable.

4. Claude Vision Stain Detection

Customer photographs the stained item at intake. Claude Vision assesses stain type and severity, generates a treatment note, and sets appropriate pricing — reducing disputes at pickup because the stain condition is documented at intake.

RICE Prioritisation

FEATURE	REACH	IMPACT	CONFIDENCE	EFFORT	SCORE	PRIORITY
4-step order wizard	High	High	High	Medium	90	P0
Morning Briefing	High	High	High	Low	95	P0
Basic CRM (customer history)	High	High	High	Medium	85	P0
Claude Vision stain detection	Medium	High	Medium	High	55	P1
Agentic Chat POS	Medium	Medium	Medium	High	40	P2
Inventory tracking	Medium	Medium	High	Medium	60	P1

MoSCoW for MVP

PRIORITY	FEATURES
Must Have	Order wizard, customer lookup, token generation, basic reporting
Should Have	Stain documentation, inventory alerts, Morning Briefing
Could Have	Claude Vision AI assessment, Agentic Chat POS
Won't Have (V1)	Multi-location sync, payment gateway, WhatsApp receipts

Success Metrics

METRIC	TARGET
Order processing time	50% reduction vs paper
Customer pickup disputes	-70% (stain documentation)
Repeat customer recognition	90% accuracy
Revenue per ticket	+15% (accurate pricing)
Daily active use by operators	>80%

Market Sizing

SEGMENT	SIZE
TAM — All Indian laundry businesses	~5M businesses
SAM — Businesses with smartphone + basic digital literacy	~500K
SOM — Reachable in Y1 via direct sales + partnerships	~5,000
