Type: Product Spec | **Domain:** EdTech · Community · AI | **Status:** Full PRD · AIAvenue Agency

Problem Statement

EdTech students in India face a fragmented communication problem that directly impacts learning outcomes:

- **Cohort discussions** happen on WhatsApp (ephemeral, hard to search, noisy)
- **Doubt resolution** happens on Telegram (inconsistent, depends on peer availability)
- **Networking** happens on LinkedIn (professional, not learning-contextual)
- **Alumni connections** don't happen at all (no structured pathway)

The result: students spend more time managing communication across platforms than they spend learning. And the knowledge generated in peer discussions — good answers to common questions, useful resources, study tips — disappears into chat history.

User Research

Surveyed 50+ edtech students across 5 platforms (NextLeap, Scaler, UpGrad, Newton School, Masai).

Key findings:

FINDING	% RESPONDENTS
Use 3+ platforms for course-related communication	78%
Find doubt resolution slow or inconsistent	71%
Feel disconnected from alumni	84%
Would pay for a better communication tool	43%
Cite communication friction as reason for dropout consideration	38%

Most common response when asked what they wanted:

> *"One place where I can ask a question and know someone will answer it."*

Market Sizing

SEGMENT	SIZE
TAM — All Indian edtech enrolled students	~15M
SAM — Students in structured cohort programmes with willingness to pay	~2M
SOM — Reachable in Y1 via B2B partnerships with edtech platforms	~50,000

Solution: 5-Feature Unified Platform

Feature 1: Cohort Chat

- Structured, searchable cohort discussions (vs WhatsApp's linear chaos)
- Threads by topic, week, and assignment
- Pinned answers persist — knowledge doesn't disappear

Feature 2: AI Doubt Feed

- Student posts a doubt → AI attempts to answer from course content
- If AI answer is insufficient → routes to peer expert or mentor
- Answered doubts become searchable knowledge base
- Replaces the "same question asked 10 times" problem

Feature 3: Peer Profiles

- Learning-contextual profiles (skills learned, projects built, current focus)
- Not a LinkedIn clone — specific to the learning context
- Enables peer-to-peer collaboration matching

Feature 4: AI Study Rooms

- Virtual focused study sessions with ambient accountability
- AI check-ins every 25 minutes (Pomodoro-aligned)
- Session logs visible to accountability partner

Feature 5: Alumni Bridge

- Structured pathway for alumni to contribute to current cohort
- Alumni office hours booking
- "Where are they now" transparency (builds aspiration, not just networking)

RICE Prioritisation

FEATURE	REACH	IMPACT	CONFIDENCE	EFFORT	SCORE	PRIORITY
AI Doubt Feed	High	High	High	Medium	85	P0
Cohort Chat	High	High	High	Low	95	P0
Peer Profiles	High	Medium	High	Low	70	P1
Alumni Bridge	Medium	High	Medium	Medium	55	P1
AI Study Rooms	Medium	Medium	Medium	High	35	P2

MoSCoW for MVP

PRIORITY	FEATURES

Must Have	Cohort Chat, AI Doubt Feed (basic)
Should Have	Peer Profiles, Alumni directory
Could Have	AI Study Rooms, Alumni office hours booking
Won't Have (V1)	Cross-platform integrations, mobile app

Success Metrics

METRIC	TARGET
Daily active users in cohort	>70% of enrolled
Doubt resolution time	<2 hours (vs 24+ hours on WhatsApp)
Knowledge base size (answered doubts)	500+ in first cohort
Alumni participation rate	>30% of alumni active monthly
Course completion rate (platform users vs non-users)	+20%

Monetisation

B2B SaaS: Sold to edtech platforms as a communication layer

- Starter: ₹50/student/month
- Growth: ₹80/student/month (AI features + analytics)
- Enterprise: Custom (white-label + API)

B2B is the right GTM because edtech platforms already have the students — this product enhances their retention and completion metrics, making it a cost-reduction tool for the platform, not just a feature addition.

Key Insight

> *The problem isn't that students don't want to learn. The problem is that the friction of getting help is high enough that they give up before they get unstuck. Every percentage point reduction in doubt resolution time is a percentage point improvement in course completion.*
